### Overview

Olenick & Associates assists clients by participating on their project teams to develop and execute the testing necessary to assure the highest quality of deployments and to establish lasting software testing practices.

### DEPLOYMENT READINESS™ Overview

Olenick & Associates has created and developed **DEPLOYMENT READINESS™** as a proprietary software testing methodology. This methodology is client and application/operations focused, to ensure that our clients are aware of the issues and risks before a software application is deployed to production.

### Service Highlight: Virtualization Readiness

The pooling of IT resources in a way that masks the physical nature and boundaries of the resources from the resource users.

Olenick & Associates is a pioneer in adopting virtualization technology to solve difficult software development and production environment problems. **DEPLOYMENT READINESS™** combined with our proven approach to software testing, O&A's use of Microsoft Virtual Server, and VMWare products has delivered significant business value to our customers.

**DEPLOYMENT READINESS™** aligns its core disciplines with elements of all major software development life cycles (SDLC). Virtualization Readiness examines your current environment issues and identifies opportunities to leverage virtual workstation and server technology to optimize hardware and maintenance costs. This technology innovation provides greater levels of service to our customer's business in either their QA or Production environments or both!

Through our extensive virtualization experience with Fortune 500 companies in a variety of industries, we have consolidated our experience to realize successful software development.

Virtualization Project Flow and Options

Customers can realize significant benefits through virtualization of their software environments. O&A's approach to virtualization has demonstrated measurable savings in Total Cost of Ownership. Our phased methodology allows you to gain incremental value resulting in lower deployment risks and clear business value returned to your organization from each step in the process. A typical flow of virtualization project engagements includes:

Benefits of Virtualizing Production Environment

- Cost Effective High Return On Investment
- Quickly test multiple software versions on same hardware simultaneously
- Less power usage
- Less physical space
- Ease of set-up and support
- Server consolidation
- Flexible availability
- Disaster Recovery
  - Off-site storage and retrieval
  - Faster recovery time
- Capacity management
- Process standardization

Start saving money now in planning your next server hardware purchases for either your QA or Production environments by evaluating how Virtualization can benefit your business.

"We believe that the consumer adoption rate for virtualization technology will grow markedly over the next 5 years. Virtualization process standardization and process automation will accelerate aggressively in the near term driven by the need for competitive agility, quality of service and lower total cost of ownership of hardware."

- Thomas F. Olenick, President, Olenick & Associates

Our staff is comprised of software professionals that pride themselves in problem solving and cause and effect thinking. Our clients believe in our commitment to follow through on our actions. Every member of our staff devotes energy and critical thinking to solve client problems.
