Overview

Olenick & Associates assists clients by participating on their project teams to develop and execute the testing necessary to assure the highest quality of deployments and to establish lasting software testing practices.

DEPLOYMENT READINESS™ Overview

Olenick & Associates has created and developed **DEPLOYMENT READINESS™** as a proprietary software testing methodology. This methodology is client and application/operations focused, to ensure that our clients are aware of the issues and risks before a software application is deployed to production.

The Olenick & Associates Dashboard

The Olenick & Associates Dashboard is a robust, inexpensive, easy to implement alternative for companies seeking the benefits of a highly visible Measurement Program without having to invest and train their staff to support proprietary technology.

O&A's experience in Project Management and Software Testing has led us to create this simple and effective approach to developing a measurement program for your company. O&A has implemented this O&A Dashboard at several of our largest clients with great success.

O&A Dashboard Features

- Standard Project Metric Graphs
- Easy to use Web-based Graphical User Interface
- Secure Access
- Hierarchical Metric Rollups
- Integration to Workflow Management Software (TestDirector, ClearQuest, PVCS Tracker)
- No Annual Licensing Costs
- Ease of Maintenance
- Customizable to your environment
- Standard Technologies (Desktop, Web Server, Database Applications)

Implementing the O&A Dashboard for Project Success

The O&A Dashboard uses standard technologies (desktop web server and database applications) to deliver metrics to your stakeholders and team members in a simple to use web browser. The O&A Dashboard is simple to install and customize. The O&A Dashboard is perfect for project-based implementations and can be scaled up to the program, department or enterprise level.

The standard productivity, schedule and quality graphs paint a clear picture of your projects. The flexibility of the Metrics Dashboard allows views to be created to display critical information quickly.

Select Metrics Dashboard Case Studies

Case Study #1: Our client needed a better way to view their project information collected in Rational ClearQuest. The O&A Metrics Dashboard allowed the project manager to easily and instantly make the progress of their project visible to the executive stakeholders.

Case Study #2: Our client used the O&A Metrics Dashboard to produce weekly reports for testing team progress, productivity and quality levels for their legacy system replacement program, PowerTools. The O&A Dashboard interfaces with Mercury Interactive TestDirector, which is used for project issue and defect management.

Our staff is comprised of software professionals that pride themselves in problem solving and cause and effect thinking. Our clients believe in our commitment to follow through on our actions. Every member of our staff devotes energy and critical thinking to solve client problems.
