Overview

Olenick & Associates provides software testing, quality assurance, project management, and IT service management consulting services to ensure the success and quality of client's projects, applications, processes, and infrastructure.

Service Highlight: Assessments

During an assessment project, Olenick & Associates evaluates current development, testing, migration, and project processes by conducting interviews with key client personnel, business and IT project team members including consultants. The following diagram shows the O&A delivery methods, competencies, and service offerings with a focus on **Assessments**:

The interviews examine current practices and identify gaps in the current processes using Olenick & Associates' Deployment Readiness Methodology and industry recognized standards for projects and the software development lifecycle.

Olenick & Associates performs all research at our client's location and then assembles a gap analysis, process improvement and project success recommendations.

Assessment Goals

Assessment Goals:

- Establish consistent quality methods of testing
- Perform standardized and structured testing on new products, enhancements, system changes, and on-going production maintenance
- Define formal tracking of issues, defects, and change requests.
- Evaluate existing testing procedures and provide consistent, structured development, training, and documentation to the organization
- Ensure that all appropriate personnel are informed of the status of testing
- Improve quality standards
- Implement changes to the testing processes
- Reduce system and regression testing time and effort through the use of automated tools
- Provide an appropriate level of metric reporting

The following diagram shows a partial map of an assessment flowchart:

Case Studies:

Case Study #1: The assessment team conducted a full quality assurance and testing assessment for several weeks. During the assessment, the team identified a significant reduction in testing time by recommending the automation of key processes using functional and performance testing tools.

Case Study #2: The assessment team conducted interviews with project team members to understand their testing processes. The team provided recommendations to enhance the existing unstructured unit testing into structured, repeatable testing.
